EXECUTIVE SUMMARY

The All Wales Medicines Strategy Group (AWMSG) has endorsed the National Prescribing Indicators (NPIs) as a means of promoting safe and cost-effective prescribing since 2003. NPIs have historically focused on primary care prescribing; however, in 2015 a set of secondary care NPIs were developed by the All Wales Prescribing Advisory Group (AWPAG) and launched by AWMSG for use in 2016–2017. This report contains data relating to the primary and secondary care NPIs for the third quarter of 2016–2017.

Background information supporting the choice of NPIs is detailed in the documents <u>National Prescribing Indicators 2016–2017</u> and <u>Secondary Care National Prescribing Indicators 2016–2017</u>, available from the AWMSG website.

PRIMARY CARE

- For 2016–2017, there are 13 primary care NPIs focusing on seven areas of prescribing and the reporting of adverse events (Yellow Cards)^{*}. Two of the indicators, lipid-regulating drugs and gabapentin and pregabalin, are new for 2016–2017.
- A threshold level of prescribing/reporting is set for 12 of the 13 NPIs^{*}.
- Of the 12 NPIs with a threshold, there was an overall improvement (in line with the aim of each indicator) across Wales in 11 NPIs, compared to the equivalent quarter of the previous year (quarter ending December 2015). The NPI that did not show an improvement was gabapentin and pregabalin (9.73% increase).
- At a national level, the NPIs associated with the largest improvements in prescribing compared to the equivalent quarter of the previous year were cephalosporins (items per 1,000 patients) (12.7% reduction), co-amoxiclav (items per 1,000 patients) (10.8% reduction) and NSAIDs (ADQs per 1,000 STAR-PUs) (10.6% reduction). In addition, Yellow Card reporting by GPs increased 39% compared to the equivalent quarter of the previous year, and Yellow Card reporting for all health board reporters increased by 12%.
- In line with the aim of the NPI, hypnotic and anxiolytic prescribing decreased across all of the health boards compared to the equivalent quarter of the previous year. The largest decrease of 16.4% was seen in Cardiff and Vale UHB.
- Prescribing of tramadol decreased in all of the health boards compared to the equivalent quarter of the previous year (in line with the aim of the NPI). The largest decrease of 11.1% was seen in Hywel Dda UHB.
- Prescribing of cephalosporins (items per 1,000 patients) decreased in all of the health boards compared to the equivalent quarter of the previous year (in line with the aim of the NPI). The largest decrease of 22.3% was seen in Powys Teaching HB.
- Prescribing of co-amoxiclav (items per 1,000 patients) decreased in all of the seven health boards compared to the equivalent quarter of the previous year (in line with the aim of the NPI). The largest decrease of 17.7% was seen in Abertawe Bro Morgannwg UHB.

^{*} For full details, including unit of measure and threshold for each NPI please see Appendix 1. For primary care NPI prescribing data for GP clusters please see Appendix 2.

SECONDARY CARE

- For 2016–2017, there are three secondary care NPIs focusing on three areas of prescribing:
 - Insulin prescribing
 - Prescribing of biosimilars
 - Antibiotic surgical prophylaxis
- Baseline data for quarter ending December 2015 are also provided to enable comparison with the previous year.
- For two of the NPIs (insulin prescribing and biosimilars), primary care data are also provided to facilitate a more comprehensive analysis.
- Prescribing of long-acting insulin analogues decreased in secondary care compared to the equivalent quarter of the previous year (in line with the aim of the NPI); there was also a decrease in primary care usage.
- In line with the aim of the NPI, filgrastim and infliximab biosimilar prescribing increased when compared to the equivalent quarter of the previous year. Although there is only a small amount of baseline data available for the insulin glargine biosimilar, as it was only appraised by AWMSG in December 2015, this medicine also showed increased usage compared to the equivalent quarter of the previous year.
- Data for duration of colorectal surgical antibiotic prophylaxis indicate that there has been a 2% decrease in the percentage of patients in Wales receiving prophylaxis for greater than 24 hours (in line with the aim of the indicator) between quarter ending December 2016 and the previous quarter ending September 2016.

The 2016–2017 NPI report for quarter ending March 2017 will be available on 21st July 2017.

^{*} For full details, including unit of measure and threshold for each NPI please see Appendix 1.

Table 1. PPI DDDs per 1,000 PUs

PRIMARY CARE

1.0 PROTON PUMP INHIBITORS

Purpose: To encourage appropriate use of PPIs.

Unit of measure: PPI DDDs per 1,000 PUs.

Aim: To reduce prescribing

Although proton pump inhibitors (PPIs) are generally well tolerated, there is emerging evidence that serious adverse effects may be linked with long-term PPI use. These include fractures of the hip, wrist and spine, *Clostridium difficile* infection, and hypomagnesaemia. Prescribers are therefore encouraged to review and reduce where possible.

In the quarter to December 2016, prescribing (DDDs per 1,000 PUs) in Wales was 14% higher than that seen in England.

- For the quarter ending December 2016, PPI usage ranged from 6,697 to 7,713 DDDs per 1,000 PUs across the health boards.
- The health board with the lowest prescribing was Hywel Dda UHB whilst the highest prescribing was seen in Betsi Cadwaladr UHB.
- Six out of the seven health boards demonstrated a reduction in prescribing, compared to the equivalent quarter of the previous year. Betsi Cadwaladr UHB demonstrated the largest decrease in prescribing.
- Cwm Taf UHB demonstrated an increase in prescribing.

2016-2017 Qtr 3 2015-2016 Qtr 3 % Change BCU 8,067 7,713 -4.39% Aneurin Bevan 7.750 7.518 -2.99% Hywel Dda 6,862 6,697 -2.41% Cardiff and Vale 6,900 6.740 -2.32% Powys 7,367 7,215 -2.05% ABMU -1.35% 7,161 7,064 **Cwm Taf** 7.148 7.228 1.13% Wales 7,407 7,223 -2.49%

2.0 LIPID-REGULATING DRUGS

Purpose: To encourage prescribers to review prescribing of certain lipid-regulating medicines – bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds – to ensure it is in line with NICE guidance.

Unit of measure: Number of prescription items of bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds as a percentage of the total number of lipid-regulating items.

Aim: To reduce prescribing

This is a new indicator for 2016–2017 and replaces the low acquisition cost statin indicator.

Prescribers are encouraged to follow NICE guidance which states that bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds should not be routinely prescribed.

- For the quarter ending December 2016, the percentage of bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds prescribed ranged from 1.74% to 3.21% across the health boards.
- The health board with the lowest percentage was Powys Teaching HB, whilst the highest percentage was seen in Cwm Taf UHB.
- The proportion of bile acid sequestrant, fibrate, nicotinic acid and omega-3 fatty acid compound prescribing decreased compared to the equivalent quarter of the previous year in all seven health boards.
- The largest decrease was seen in Powys Teaching HB and the smallest decrease was seen in Betsi Cadwaladr UHB.

Table 2. Items of bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds as a percentage of total lipid-regulating items

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change

ABMU

Aneurin Bevan

3.0 INHALED CORTICOSTEROIDS

Purpose: To encourage the routine review of inhaled corticosteroids (ICS) in people with asthma, particularly those on high strengths, encouraging step down of the strength when clinically appropriate.

Unit of measure: Low strength ICS items as a percentage of all ICS prescribing.

Aim: To increase prescribing

Potentially serious systemic side effects, such as adrenal suppression, growth failure, decrease in bone mineral density, cataracts and glaucoma, may be associated with ICS, particularly at high doses.

- For the quarter ending December 2016, the proportion of low-strength ICS prescribing ranged from 52.2% to 65.1% across the health boards.
- The health board with the highest percentage was Cardiff and Vale UHB, whilst the lowest percentage was seen in Abertawe Bro Morgannwg UHB.
- The proportion of low-strength ICS prescribing increased across all health boards compared to the equivalent quarter of the previous year.
- The greatest increase was seen in Cwm Taf UHB, and the smallest increase was seen in Hywel Dda UHB.

Table 3. Low-strength ICS prescribing as a percentage of all ICS prescribing

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Cwm Taf	52.5	56.2	7.06%
Powys	60.2	63.6	5.66%
Aneurin Bevan	53.7	56.2	4.60%

Wales	56.2	58.6	4.23%

Page / of 42

4.0 HYPNOTICS AND ANXIOLYTICS

Purpose: To encourage a reduction in the inappropriate prescribing of hypnotics and anxiolytics.

Unit of measure: Hypnotic and anxiolytic ADQs per 1,000 STAR-PUs.

Aim: To reduce prescribing

There has been ongoing concern with regard to the high level of anxiolytic and hypnotic prescribing within NHS Wales. Some prescribing may be inappropriate and contribute to the problem of physical and psychological dependence, and/or may be responsible for masking underlying depression.

The prescribing of hypnotics and anxiolytics continues to decrease across Wales, in line with the aim of this indicator. However, for the quarter ending December 2016, prescribing in Wales (ADQs per 1,000 STAR-PUs) remained 49% higher than that seen in England.

- For the quarter ending December 2016, hypnotic and anxiolytic prescribing ranged from 2,348 to 3,842 ADQs per 1,000 STAR-PUs across the health boards.
- The health board with the lowest prescribing was Powys Teaching HB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Hypnotic and anxiolytic prescribing decreased compared to the equivalent quarter of the previous year in all of the health boards.
- The largest decrease was seen in Cardiff and Vale UHB, and the smallest decrease was seen in Powys Teaching HB.

Table 4. Hypnotic and anxiolytic ADQs per 1,000 STAR-PUs

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Cardiff and Vale	2,833	2,369	-16.4%
Hywel Dda	3,861	3,479	-9.89%
BCU	3,861	3,488	-9.66%
ABMU	3,625	3,334	-8.03%
Cwm Taf	4,171	3,842	-7.88%
Aneurin Bevan	3,608	3,338	-7.49%
Powys	2,419	2,348	-2.90%
Wales	3,589	3,255	-9.32%

5.0 ANALGESICS

There are two NPIs monitoring the usage of analgesics for 2016–2017:

- 1. Tramadol
- 2. Gabapentin and pregabalin

5.1 Tramadol

Purpose: To encourage the appropriate use and review of tramadol, minimising the potential for diversion and misuse.

Unit of measure: Tramadol DDDs per 1,000 patients.

Aim: To reduce prescribing

Tramadol accounts for an increasing number of deaths and reports to the National Poisons Information Service. It is subject to abuse and dependence and there are patient safety concerns with regard to drug interactions.

From December 2015 to December 2016, prescribing of tramadol decreased across Wales, in line with the aim of this indicator.

- For the quarter ending December 2016, tramadol prescribing ranged from 429 to 747 DDDs per 1,000 patients across the health boards.
- The health board with the lowest prescribing was Powys Teaching HB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Tramadol prescribing decreased compared to the equivalent quarter of the previous year in all of the health boards.
- The largest decrease was seen in Hywel Dda UHB and the smallest decrease was seen in Betsi Cadwaladr UHB.

Table 5. Tramadol DDDs per 1,000 patients

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Hywel Dda	767	682	-11.1%
Aneurin Bevan	723	644	-10.9%
Cwm Taf	830	747	-9.97%
ABMU	771	704	-8.72%
Powys	468	429	-8.38%
Cardiff and Vale	624	591	-5.33%
BCU	706	671	-4.97%
Wales	716	657	-8.29%

5.2 Gabapentin and pregabalin

Purpose: To encourage the appropriate use and review of gabapentin and pregabalin, minimising the potential for diversion and misuse.

Unit of measure: Gabapentin and pregabalin DDDs per 1,000 patients.

Aim: To reduce prescribing

Gabapentin and pregabalin have a well defined role in the management of a number of conditions including epilepsy and neuropathic pain, and pregabalin also has a role in treatment of generalised anxiety disorder. Both gabapentin and pregabalin have known psychiatric side effects and there is a potential risk of dependence, misuse and diversion. Prescribers should make evidence-based, informed decisions on whether to prescribe, taking into account the risks and benefits of these medicines.

From December 2015 to December 2016, prescribing of gabapentin and pregabalin increased across Wales.

- For the quarter ending December 2016, gabapentin and pregabalin prescribing ranged from 1,042 to 1,716 DDDs per 1,000 patients across the health boards.
- The health board with the lowest prescribing was Cardiff and Vale UHB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Gabapentin and pregabalin prescribing increased compared to the equivalent quarter of the previous year in all of the health boards.
- The smallest increase was seen in Cardiff and Vale UHB and the largest increase was seen in Cwm Taf UHB.

 Table 6. Gabapentin and pregabalin DDDs per 1,000 patients

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Cardiff and Vale	1,014	1,042	2.77%
Hywel Dda	1,137	1,245	9.48%
Powys	950	1,043	9.73%
Aneurin Bevan	1,452	1,599	10.1%
ABMU	1,334	1,471	10.3%
BCU	1,098	1,215	10.7%
Cwm Taf	1,497	1,716	14.6%
Wales	1,228	1,347	9.73%

Note: DDDs per 1,000 patients for Aneurin Bevan UHB Q1 2016–2017 should be 1,530 rather than 1,619 as reported.

6.0 ANTIBIOTICS

Purpose: To encourage the appropriate prescribing of antibiotics. The development of NPIs for antibiotic prescribing supports one of the key elements of the Welsh Antimicrobial Resistance Programme: to inform, support and promote the prudent use of antimicrobials.

There are four primary care antibiotic NPIs for 2016–2017:

- 1. Total antibacterial items
- 2. Co-amoxiclav
- 3. Cephalosporins
- 4. Fluoroquinolones

6.1 Total antibacterial items

Unit of measure: Total antibacterial items per 1,000 STAR-PUs.

Aim: To reduce prescribing

No target is set for this indicator due to seasonal variations in prescribing, although a reduction in prescribing year on year is encouraged, with measurement based on data for quarter ending December.

- For the quarter ending December 2016, the total number of antibacterial items per 1,000 STAR-PUs ranged from 282 to 371 across the health boards.
- The health board with the lowest prescribing was Powys Teaching HB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Abertawe Bro Morgannwg UHB demonstrated the greatest reduction in prescribing compared to the equivalent quarter of the previous year.
- Cwm Taf UHB demonstrated the largest increase in prescribing, compared to the equivalent quarter of the previous year.

Table 7. Total antibacterial items per 1,000 STAR-PUs

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
ABMU	369	356	-3.54%
Hywel Dda	354	345	-2.54%
Cardiff and Vale	321	315	-2.00%
Aneurin Bevan	345	338	-2.00%
BCU	342	344	0.67%
Powys	279	282	0.95%
Cwm Taf	366	371	1.34%
Wales	345	340	-1.32%

Figure 7. Trend in antibacterial prescribing items per 1,000 STAR-PUs

Page 11 of 42

6.2 Co-amoxiclav, cephalosporins and fluoroquinolones

Unit of measure: Each of these antibacterial indicators is monitored using two measures:

- 1. Items as a percentage of total antibacterial items
- 2. Items per 1,000 patients

Aim: To reduce prescribing

Prescribing of co-amoxiclav, cephalosporins and fluoroquinolones are monitored, as these antibacterials are associated with an increased risk of *Clostridium difficile* infection.

6.2.1 Co-amoxiclav, cephalosporins and fluoroquinolones as a percentage of total antibacterial items

From December 2015 to December 2016, the number of items of each antibacterial or group of antibacterials as a percentage of all antibacterial prescribing decreased across Wales, in line with the aim of this indicator.

- The proportion of co-amoxiclav prescribing decreased, compared to the equivalent quarter of the previous year, in all seven health boards. The largest decrease was seen in Cwm Taf UHB (18.7%), and the smallest decrease was seen in Aneurin Bevan UHB (0.14%).
- The proportion of cephalosporin prescribing decreased, compared to the equivalent quarter of the previous year, in all seven health boards. The largest decrease was seen in Powys Teaching HB (23.2%), and the smallest decrease was seen in Cwm Taf UHB (1.99%).
- The proportion of fluoroquinolone prescribing decreased, compared to the equivalent quarter of the previous year, in four out of the seven health boards. The largest decrease was seen in Aneurin Bevan UHB (7.86%). There was an increase in Cwm Taf (3.08%), Betsi Cadwaladr (1.50%) and Cardiff and Vale (0.51%).

Indicator

Co-amoxiclav items % of antibacterial items
 Cephalosporin items % of antibacterial items
 Fluoroquinolone items % of antibacterial items

6.2.2 Co-amoxiclav items per 1,000 patients

From December 2015 to December 2016 prescribing of coamoxiclav items per 1,000 patients decreased across Wales by 10.8%, in line with the aim of this indicator.

- For the quarter ending December 2016, co-amoxiclav prescribing ranged from 4.67 to 8.12 items per 1,000 patients across the health boards.
- The health board with the lowest prescribing was Cardiff and Vale UHB, whilst the highest prescribing was seen in Hywel Dda UHB.
- Co-amoxiclav prescribing decreased compared to the equivalent quarter of the previous year in all of the seven health boards.
- The largest decrease was seen in Abertawe Bro Morgannwg UHB, and the smallest decrease was seen in Aneurin Bevan UHB.

 Table 8. Co-amoxiclav items per 1,000 patients

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
ABMU	8.84	7.27	-17.7%
Cwm Taf	9.60	7.92	-17.5%
Hywel Dda	9.68	8.12	-16.1%
Cardiff and Vale	5.06	4.67	-7.76%
Powys	6.49	6.08	-6.33%

Wales	7.08	6.32	-10.8%

Figure 9. Trend in co-amoxiclav prescribing items per 1,000 patients

Welsh Analytical Prescribing Support Unit

6.2.3 Cephalosporin items per 1,000 patients

From December 2015 to December 2016 prescribing of cephalosporin items per 1,000 patients decreased across Wales by 12.7%, in line with the aim of this indicator.

- For the quarter ending December 2016, cephalosporin prescribing ranged from 3.38 to 9.59 items per 1,000 patients across the health boards.
- The health board with the lowest prescribing was Cardiff and Vale UHB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Cephalosporin prescribing decreased compared to the equivalent quarter of the previous year in all of the seven health boards.
- The largest decrease was seen in Powys Teaching HB, and the smallest decrease was seen in Cwm Taf UHB.

Table 9. Cephalosporins items per 1,000 patients

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Powys	4.89	3.80	-22.3%
Cardiff and Vale	4.28	3.38	-21.1%
ABMU	7.02	5.95	-15.3%
Hywel Dda	7.48	6.40	-14.5%

BCU	9.20	8.13	-11.6%
Cwm Taf	9.65	9.59	-0.61%
Wales	6.97	6.08	-12.7%

6.2.4 Fluoroquinolone items per 1,000 patients

From December 2015 to December 2016, the prescribing of fluoroquinolone items decreased across Wales by 3.61%, in line with the aim of this indicator.

- For the quarter ending December 2016, fluoroquinolone prescribing ranged from 2.60 to 4.39 items per 1,000 patients across the health boards.
- The health board with the lowest prescribing was Aneurin Bevan UHB, whilst the highest prescribing was seen in Betsi Cadwaladr UHB.
- Aneurin Bevan UHB demonstrated the greatest reduction in prescribing compared to the equivalent quarter of the previous year.
- Cwm Taf UHB demonstrated the largest increase in prescribing compared to the equivalent quarter of the previous year.

Table 10. Fluoroquinolone items per 1,000 patients

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Aneurin Bevan	2.88	2.60	-9.87%
ABMU	4.62	4.25	-8.05%
Hywel Dda	4.49	4.14	-7.90%
Powys	3.67	3.54	-3.52%
Cardiff and Vale	3.16	3.11	-1.49%
BCU	4.29	4.39	2.39%
Cwm Taf	3.37	3.52	4.53%
Wales	3.81	3.67	-3.61%

7.0 NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

Purpose: Ensure that the risks associated with non-steroidal anti-inflammatory drugs (NSAIDs) are minimised by appropriate choice and use.

There are two NSAID NPIs for 2016–2017.

- 1. All NSAIDs
- 2. Ibuprofen and naproxen

7.1 All NSAIDs

Unit of measure: NSAID ADQs per 1,000 STAR-PUs.

Aim: To reduce prescribing

This indicator aims to encourage a reduction in total NSAID prescribing, which has been consistently higher than that seen in England. NSAIDs are associated with increased risk of serious gastro-intestinal toxicity, cardiovascular adverse events and renal failure, and are contraindicated in many other disease areas.

Since the introduction of this indicator, total NSAID prescribing has fallen across Wales, in line with the aim of the indicator.

- For the quarter ending December 2016, total NSAID prescribing ranged from 1,462 to 1,756 ADQs per 1,000 STAR-PUs across the health boards.
- The health board with the lowest prescribing was Cardiff and Vale UHB, whilst the highest prescribing was seen in Cwm Taf UHB.
- Total NSAID prescribing decreased compared to the equivalent quarter of the previous year in all of the health boards.
- The largest decrease was seen in Cardiff and Vale UHB, and the smallest decrease was seen in Cwm Taf UHB.

Table 11. NSAID ADQs per 1,000 STAR-PUs

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Cardiff and Vale	1,702	1,462	-14.1%
Powys	1,689	1,489	-11.8%
ABMU	1,828	1,631	-10.8%
BCU	1,741	1,557	-10.6%
Aneurin Bevan	1,767	1,587	-10.2%
Hywel Dda	1,781	1,615	-9.34%
Cwm Taf	1,883	1,756	-6.78%
Wales	1,771	1,584	-10.6%

Figure 12. Trend in NSAID prescribing ADQs per 1,000 STAR-PUs

7.2 Ibuprofen and naproxen

Unit of measure: Ibuprofen and naproxen items as a percentage of NSAID prescribing.

Aim: To increase prescribing

This indicator aims to promote the prescribing of ibuprofen and naproxen at appropriate doses over other NSAIDs, as they are associated with a lower risk of cardiovascular adverse events.

Since the introduction of this indicator, the proportion of ibuprofen and naproxen prescribing as a percentage of total NSAID usage has increased in line with the aim of this indicator.

- For the quarter ending December 2016, the proportion of ibuprofen and naproxen prescribing ranged from 79.0% to 85.2% across the health boards.
- The health board with the highest prescribing was Cwm Taf UHB, whilst the lowest prescribing was seen in Abertawe Bro Morgannwg UHB.
- The proportion of ibuprofen and naproxen prescribing increased compared to the equivalent quarter of the previous year in all of the health boards.
- The largest increase was seen in Aneurin Bevan UHB, and the smallest increase was seen in Cwm Taf UHB.

Table 12. Ibuprofen and naproxen as a percentage of NSAID prescribing

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Aneurin Bevan	81.5	82.4	1.06%
ABMU	78.5	79.0	0.69%
BCU	81.2	81.6	0.58%
Hywel Dda	81.3	81.8	0.57%
Powys	82.9	83.2	0.35%
Cardiff and Vale	83.7	83.9	0.31%
Cwm Taf	85.1	85.2	0.06%
Wales	81.6	82.1	0.60%

Figure 13. Trend in ibuprofen and naproxen prescribing as a percentage of NSAID prescribing

8.0 YELLOW CARDS

Purpose: To encourage an increase in the number of Yellow Cards submitted by GP practices in Wales.

Unit of measure: Number of Yellow Cards submitted, per practice and per health board.

Aim: To increase reporting

Adverse drug reactions (ADRs) are a significant clinical problem, increasing morbidity and mortality. Approximately 6.5% of hospital admissions in adults and 2.1% in children are attributed to ADRs.

The Yellow Card Scheme is vital in helping the Medicines and Healthcare products Regulatory Agency (MHRA) monitor the safety of medicines and vaccines that are on the market.

The number of Yellow Cards submitted by GPs in Wales increased by 39% compared to the equivalent quarter of the previous year.

The largest increase in GP Yellow Card reporting was seen in Aneurin Bevan UHB. The largest decrease was seen in Betsi Cadwaladr UHB.

Table 13. Number of Yellow Cards submitted by GPs

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Aneurin Bevan	7	70	900%
Powys	10	17	70%
Cardiff and Vale	35	39	11%
Cwm Taf	9	10	11%
ABMU	48	47	-2%
Hywel Dda	26	25	-4%
BCU	43	39	-9%
Wales	178	247	39%

The number of Yellow Cards submitted by health boards in Wales increased by 12% compared to the equivalent quarter of the previous year.

Table 14. Number of Yellow Cards submitted by health boards

	2015–2016 Qtr 3	2016–2017 Qtr 3	% Change
Aneurin Bevan	40	94	135%
ABMU	81	111	37%
Cardiff and Vale	70	84	20%
BCU	128	116	-9%
Cwm Taf	24	21	-13%
Hywel Dda	79	62	-22%
Powys	35	26	-26%
Wales	457	514	12%

Figure 14. Number of GP reports per 100,000 health board population

SECONDARY CARE

1.0 INSULIN

Purpose: Ensure long-acting analogue insulin prescribing in type 2 diabetes mellitus is in line with NICE guidance to maximise cost-effective prescribing within Wales.

Unit of measure: Items/number of long-acting insulin analogues expressed as a percentage of total insulin prescribed within primary and secondary care

Aim: To reduce prescribing.

NICE guidance recommends human isophane (neutral protamine Hagedorn [NPH]) insulin as the first choice insulin-based treatment when prescribing insulin in type 2 diabetes mellitus. For most people with type 2 diabetes, long-acting insulin analogues offer no significant benefit over human isophane insulin and are more expensive.

This report considers data sets from both secondary and primary care, as prescribing will usually be continued in the primary care setting following secondary care initiation.

Secondary care prescribing

- For the quarter ending December 2016, long-acting insulin analogues as a percentage of total long- and intermediate-acting insulin ranged from 50.0% to 88.2% within secondary care settings across Wales.
- The lowest prescribing was seen in Velindre NHS Trust; however, their usage is very low and so their percentage changes are likely to show a greater magnitude of fluctuation between comparative periods. Cwm Taf UHB had the next lowest prescribing at 57.5%, a decrease of 7.56% compared to the equivalent quarter of the previous year.

- Outside of Velindre NHS Trust, Betsi Cadwaladr UHB showed the greatest percentage decrease at 16.2% compared to the equivalent quarter of the previous year.
- The health board/trust with the highest prescribing percentage was Abertawe Bro Morgannwg UHB (88.2%) with an increase of 11.2% from the equivalent quarter of the previous year.
- The proportion of long-acting insulin analogue prescribing decreased in six out of the seven health boards/trusts, compared to the equivalent quarter of the previous year.

Table 15. Long-acting insulin analogues as a percentage of total long- and intermediate-acting insulin prescribing in secondary care

	2015–2016 Qtr 3 (%)	2016–2017 Qtr 3 (%)	% Change
Velindre	100	50.0	-50.0
BCU	81.9	68.6	-16.2
Aneurin Bevan	71.5	65.6	-8.25
Cwm Taf	62.2	57.5	-7.56
Cardiff and Vale	80.5	75.5	-6.21
Hywel Dda	86.8	86.3	-0.58
ABMU	79.3	88.2	11.2
Wales	78.2	73.7	-5.75

Primary care prescribing

From December 2015 to December 2016, the prescribing of long-acting insulin analogues in primary care as a proportion of total long- and intermediate-acting insulin prescribing decreased across Wales by approximately 0.08%, in line with the aim of the secondary care indicator.

- For the quarter ending December 2016, long-acting insulin analogue prescribing ranged from 79.2% to 93.8% across the health boards.
- The health board with the lowest prescribing was Cwm Taf UHB, whilst the highest prescribing was seen in Hywel Dda UHB.
- Across the seven health boards in Wales prescribing decreased compared to the equivalent quarter of the previous year in three health boards, increased in three health boards and showed no change in a further one.
- The largest decrease was seen in Betsi Cadwaladr UHB and the largest increase was seen in Powys Teaching HB.

 Table 16. Long-acting insulin analogues as a percentage of total

 long- and intermediate-acting insulin prescribing in primary care

	2015–2016 Qtr 3 (%)	2016–2017 Qtr 3 (%)	% Change
BCU	94.0	92.6	-1.51
Cardiff and Vale	91.4	90.9	-0.58
Cwm Taf	79.4	79.2	-0.30
Aneurin Bevan	86.5	86.5	0.00
Hywel Dda	93.7	93.8	0.12
ABMU	92.6	93.4	0.86
Powys	86.0	87.4	1.55
Wales	89.8	89.7	-0.08

2.0 BIOSIMILARS

Purpose: Ensure prescribing of biosimilar medicines is in line with AWMSG guidance to support cost-effective prescribing within Wales.

Unit of measure: Quantity of biosimilar medicines prescribed as a percentage of total 'reference' product plus biosimilar.

Aim: To increase appropriate prescribing in line with guidance and increase commercial competition.

Biological medicines are those that are made or derived from a biological source and, as such, are complex, with inherent variability in their structure. A biosimilar medicine is a biological medicine that is developed to be highly similar and clinically equivalent to an existing biological medicine (i.e. 'reference' medicine or 'originator' medicine). Continuing development of biosimilar medicines offers an increased choice for patients and clinicians.

There is an increasing range of biosimilar products becoming available and therefore new products will be monitored and reported on in this section of the NPI report as they begin to be used within NHS Wales.

Data reporting

MHRA guidelines state that biological medicines, including biosimilar medicines, must be prescribed by brand name to prevent automatic substitution taking place without clinician and patient involvement, and to support ongoing pharmacovigilance of the individual products. However, filgrastim, infliximab and insulin glargine all show some generic prescribing. For infliximab the cost per item for these generic items is identical to that of the reference product; these generic items have therefore been included in figures for total quantity of the reference product. For filgrastim the cost per item falls between reference and biosimilar, so these generic items have been presented separately.

2.1 Filgrastim

There was an increase in the use of filgrastim biosimilars (Nivestim[®], Accofil[®] and Zarzio[®]) as a percentage of all filgrastim from 97.9% to 98.7% within NHS Wales from quarter ending December 2015 to quarter ending December 2016.

The use of the filgrastim biosimilars (Nivestim[®] and Zarzio[®]) in place of the reference product (Neupogen[®]) has saved an estimated £183,177 for NHS Wales in the quarter ending December 2016.

Table 17. Quantity of filgrastim generic, reference (Neupogen[®]) and biosimilar (Nivestim[®], Accofil[®] and Zarzio[®]) prescribed in NHS Wales

Medicine	Biosimilar	Quarter	Total quantity
Filgractim (gaparia)		2015–2016 Qtr 3	60
Fligrastim (generic)		2016–2017 Qtr 3	48
Filgrastim reference		2015–2016 Qtr 3	73
(Neupogen [®])		2016–2017 Qtr 3	30
	Nivectim®	2015–2016 Qtr 3	1,090
	NIVESLIII	2016–2017 Qtr 3	236
	Zorzio®	2015–2016 Qtr 3	5,055
	Zarzio	2016–2017 Qtr 3	5,221
	Accefil®	2015-2016 Qtr 3	0
	ACCOTIL	2016-2017 Qtr 3	452

2.1.1 Secondary care

Prescribing of filgrastim biosimilars increased slightly as a percentage of all filgrastim from 98.33% to 99.09% in secondary care from quarter ending December 2015 to quarter ending December 2016.

Table 18. Quantity of filgrastim generic, reference (Neupogen[®]) and biosimilar (Nivestim[®], Accofil[®] and Zarzio[®]) prescribed in secondary care

Medicine	Biosimilar^	Quarter	Total quantity
Filgrastim (gonoric)		2015–2016 Qtr 3	30
Fligrastilli (generic)		2016–2017 Qtr 3	23
Filgrastim reference		2015–2016 Qtr 3	73
(Neupogen [®])		2016–2017 Qtr 3	30
	Nivestim®	2015–2016 Qtr 3	1090
	NiveStilli	2016–2017 Qtr 3	236
	Zarzio [®]	2015–2016 Qtr 3	4991
		2016–2017 Qtr 3	5069
	Accofil®	2015-2016 Qtr 3	0
	ACCOTI	2016-2017 Qtr 3	452

^Filgrastim biosimilars TevaGrastim[®] and Ratiograstim[®], as within the baseline report, have not been used during the quarter ending December 2016.

Figure 16. Proportion of filgrastim prescribing as generic, reference (Neupogen[®]) and biosimilar (Nivestim[®], Accofil[®] and Zarzio[®]) in secondary care – Quarter ending December 2016

Figure 17. Health board filgrastim generic, reference (Neupogen[®]) and biosimilar (Nivestim[®], Accofil[®] and Zarzio[®]) as a percentage of total filgrastim prescribed in secondary care – Quarter ending December 2016

2.1.2 Primary care

Prescribing of filgrastim biosimilar Zarzio[®] increased as a percentage of all filgrastim from 68.09% to 85.88% in primary care from quarter ending December 2015 to quarter ending December 2016.

Table 19. Quantity of filgrastim generic, reference (Neupogen[®]) and biosimilar (Nivestim[®] and Zarzio[®]) prescribed in primary care

Medicine	Biosimilar	Quarter	Total quantity
Filgractim (gaparia)		2015–2016 Qtr 3	30
Fligrastilli (generic)		2016–2017 Qtr 3	25
Filgrastim reference		2015–2016 Qtr 3	0
(Neupogen [®])		2016–2017 Qtr 3	0
	Nivectim®	2015–2016 Qtr 3	0
	Nivestim	2016–2017 Qtr 3	0
	Zarzio [®]	2015–2016 Qtr 3	64
		2016–2017 Qtr 3	152

2.2 Infliximab

There was an increase in the use of the infliximab biosimilar (Inflectra[®]) as a percentage of all infliximab from 18.8% to 52.7% within NHS Wales from quarter ending December 2015 to quarter ending December 2016. This is the first quarter reported where the use of biosimilar infliximab has been greater than the reference product, as illustrated in Figures 18 and 19.

The use of biosimilar infliximab (Inflectra[®]) in place of the reference product (Remicade[®]) has saved an estimated £301,419 for NHS Wales in the quarter ending December 2016.

Table 20. Quantity of infliximab reference (Remicade[®]) and biosimilar (Inflectra[®]) prescribed in NHS Wales

Medicine	Biosimilar	Quarter	Total quantity
Infliximab reference		2015–2016 Qtr 3	3958
(Remicade [®]) ⁺		2016–2017 Qtr 3	2871
	Inflectra®	2015–2016 Qtr 3	916*
		2016–2017 Qtr 3	3193*

[†]These data include supplies recorded through homecare.

*Due to quantity discrepancy within data set this number has been estimated.

Figure 18. Infliximab reference (Remicade[®]) and biosimilar (Inflectra[®]) percentage change

Figure 19. Proportion of infliximab prescribing as reference (Remicade[®]) and biosimilar (Inflectra[®]) – Quarter ending December 2016

2.2.1 Secondary care

Five health boards show generic infliximab prescribing in secondary care. As previously mentioned, in order to adhere to MHRA guidelines infliximab supplies should be recorded as the brand name supplied: Remicade[®] or Inflectra[®].

Figure 20. Infliximab generic, reference (Remicade[®]) and biosimilar (Inflectra[®]) as a proportion of total infliximab prescribed in secondary care – Quarter ending December 2016

2.3 Insulin glargine

The insulin glargine biosimilar (Abasaglar[®]) was appraised by AWMSG in December 2015 and prescribing is being monitored and reported on, as part of the increasing range of biosimilar products. Although only a small amount of usage data is available, there are some baseline data from the quarter ending December 2015 to allow some comparison between relevant quarters to be made. Within NHS Wales there was an increase in the use of insulin glargine biosimilar (Abasaglar[®]) from 0.02% to 1.84%.

Table 21. Quantity of insulin glargine reference (Lantus[®] and Toujeo[®]) and biosimilar (Abasaglar[®]) prescribed within secondary care – Quarter ending December 2016

Medicine	Biosimilar	Quarter	Total quantity
Insulin glargine reference (Lantus [®] and Toujeo [®])		2015-2016 Qtr 3	1727
		2016-2017 Qtr 3	1834
Abasaglar®	Abaaadar®	2015-2016 Qtr 3	0
	2016-2017 Qtr 3	23	

*The recommendation by AWMSG for insulin glargine (Abasaglar[®]) was restricted for use within its licensed indication in accordance with NICE or AWMSG guidance for insulin glargine (Lantus[®]).

Table 22. Quantity of insulin glargine reference (Lantus[®] and Toujeo[®]) and biosimilar (Abasaglar[®]) prescribed within primary care – Quarter ending December 2016

Medicine	Biosimilar	Quarter	Total quantity
Insulin glargine reference (Lantus [®] and Toujeo [®])		2015-2016 Qtr 3	32,503
		2016-2017 Qtr 3	32,296

	Abasayiai	2016-2017 Qtr 3	618

Table 23. Quantity of insulin glargine reference (Lantus[®] and Toujeo[®]) and biosimilar (Abasaglar[®]) prescribed within NHS Wales – Quarter ending December 2016

Medicine	Biosimilar	Quarter	Total quantity
Insulin glargine reference (Lantus [®] and Toujeo [®])		2015-2016 Qtr 3	34,230
		2016-2017 Qtr 3	34,130
	Abacadar®	2015-2016 Qtr 3	7
	Abasagiar	2016-2017 Qtr 3	641

3.0 ANTIBIOTICS

Purpose: To encourage the appropriate prescribing of antibiotics. The development of NPIs for antibiotic prescribing supports one of the key elements of the Welsh Antimicrobial Resistance Programme: to inform, support and promote the prudent use of antimicrobials

Unit of measure: Proportion of elective colorectal patients receiving surgical prophylaxis for more than 24 hours.

Aim: To reduce prescribing.

Due to surgical prophylaxis numbers being small and prone to misinterpretation at hospital level, the data are presented at health board level. Hospital level data are available if required.

- There is a 2% decrease in the Welsh average when comparing data for quarter ending December 2016 with the previous quarter. During this period, two health boards (ABM UHB and Betsi Cadwaladr UHB) have shown a reduction in the percentage of patients receiving prophylaxis for > 24 hours, and three health boards (Aneurin Bevan UHB, Cardiff and Vale UHB and Hywel Dda UHB) have shown an increase.
- There was no change in the percentage of patients receiving prophylaxis for > 24 hours in Cwm Taf UHB.
- In Betsi Cadwaladr UHB all patients were receiving prophylaxis for < 24 hours in quarter ending December 2016.
- Three of the six health boards are below the Welsh average for the percentage of patients receiving prophylaxis > 24 hours for the quarter ending December 2016, a decrease from four of six in the previous quarter.

Figure 21. Percentage of patients whose duration of colorectal surgical prophylaxis is > 24 hours

CAUTION WITH INTERPRETING NPI MONITORING DATA

The Medusa data warehouse is reliant on data input by individual hospital pharmacy departments. If the data on a medicine are input under an alternative name to the usual generic or brand name, it may not be identified at extraction.

Medusa records the issue of medicines within the secondary care setting in Wales. Where supplies are issued to named patients, it can be assumed that the difference between number of medicines issued and number administered to patients is not significant. However, when the supplies are issued to wards or clinics, these items are often held as stock and therefore may be administered to patients at a considerably later point in time. However, within this report they are only considered for analysis within the time period they were issued.

The report includes medicines supplied by homecare and recorded through the hospital system; medicines supplied through other homecare providers are not included in this report. Therefore some medicines use data may currently be incomplete. This issue is being worked on within NHS Wales as a priority.

Medicines supplied through hospitals in England or on FP10HP (issued by hospital clinicians in NHS England) to patients resident in Wales, which do not get issued via Medusa or recorded through CASPA, are not included in this report.

Combining data obtained from two different software systems provides challenges, particularly as CASPA and Medusa report data via different measurement criteria. Hence, in order to amalgamate data, total cost of medicine usage is reported for all indicators and, where relevant, other measures such as total quantity, items and number are also reported.

GLOSSARY

ADQ – The average daily quantity (ADQ) is a measure of prescribing volume based upon prescribing behaviour in England. It represents the assumed average maintenance dose per day for a medicine used for its main indication in adults. The ADQ is not a recommended dose but an analytical unit to compare prescribing activity.

DDD – The defined daily dose (DDD), developed by the World Health Organization, is a unit of measurement whereby each medicine is assigned a value within its recognised dosage range. The value is the assumed average maintenance dose per day for a medicine when used for its main indication in adults. A medicine can have different DDDs depending on the route of administration.

PU – Prescribing units (PUs) were adopted to take account of the greater need of elderly patients for medication in reporting prescribing performance at both the practice and primary care organisational level.

PRESCRIBING – Although the term 'prescribing' is used in this report, the data presented within the primary care section of the report represent prescriptions that have been dispensed and forwarded for pricing. It is assumed that the difference between the number of prescriptions issued and those dispensed is not significant, and that dispensing provides an accurate representation of prescribing.

STAR-PU – Specific therapeutic group age-sex related prescribing units (STAR-PUs) are designed to measure prescribing weighted for age and sex of patients. There are differences in the age and sex of patients for whom medicines in specific therapeutic groups are usually prescribed. To make such comparisons, STAR-PUs have been developed based on costs of prescribing of items within therapeutic groups.

APPENDIX 1. AWMSG NATIONAL PRESCRIBING INDICATORS 2016–2017

Primary care indicator	Unit of measure	Target for 2016–2017
Proton pump inhibitors	PPI DDDs per 1,000 PUs	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
Lipid-regulating drugs	Items of bile acid sequestrants, fibrates, nicotinic acid and omega-3 fatty acid compounds (BNF 2.12 sub-set) as a percentage of total lipid-regulating items	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
Inhaled corticosteroids	Low strength ICS items as a percentage of all ICS prescribing	Maintain performance levels within the upper quartile, or show an increase towards the quartile above
Hypnotics and anxiolytics	Hypnotic and anxiolytic ADQs per 1,000 STAR-PUs	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
Analgesics	Tramadol DDDs per 1,000 patients	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
	Gabapentin and pregabalin DDDs per 1,000 patients	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
Antibiotics	Total antibacterial items per 1,000 STAR-PUs	No performance target set; aim for reduction in prescribing year on year, measuring quarter to December only
	Co-amoxiclav items per 1,000 patients Co-amoxiclav items as a percentage of total antibacterial items	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
	Cephalosporin items per 1,000 patients Cephalosporin items as a percentage of total antibacterial items	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
	Fluoroquinolone items per 1,000 patients Fluoroquinolone items as a percentage of total antibacterial items	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
Non-steroidal anti- inflammatory drugs (NSAIDs)	NSAID ADQs per 1,000 STAR-PUs	Maintain performance levels within the lower quartile, or show a reduction towards the quartile below
	Ibuprofen and naproxen items as a percentage of NSAID prescribing	Maintain performance levels within the upper quartile, or show an increase towards the quartile above
Yellow Cards	Number of Yellow Cards submitted per practice and per health board	Target for GP practice – GPs to submit one Yellow Card per 2,000 practice population. Target for each health board – submit Yellow Cards in excess of one per 2,000 health board population
Secondary care indicator	Unit of measure	
Insulin prescribing	Items/number of long-acting insulin analogues expressed as a percentage of total insulin prescribed within primary and secondary care.	
Prescribing of biosimilars	Quantity of biosimilar medicines prescribed as a percentage of total 'reference' product plus biosimilar.	
Antibiotic surgical prophylaxis	Proportion of elective colorectal patients receiving surgical prophylaxis for more than 24 hours.	
ADQ = average daily quantity; DDD = defined daily dose; PU = prescribing unit; STAR-PU = specific therapeutic group age-sex related prescribing unit
